4K HDMI Wireless Transmitter Collaboration Tool

The Project Telecom Wireless HDMI Transmitter and Receiver Collaboration Tool allows you to wirelessly mirror in 4K High Definition content from one source device to another without the need for a physical HDMI cable. It can be used to connect Laptops, Tablets, PC's and even Mobile Phones including iOS and Android operating systems wirelessly to a TV, Monitor, Projector or any other audio/visual peripheral, enabling content or presentations to be shared with a much larger audience, making the Collaboration Tool ideal for training.
