1. Product Overview

In this section, we introduce the **2N**[®] **Indoor Touch 2.0** product, outline its application options and highlight the advantages following from its use. The section also includes safety precautions.

Here is what you can find in this section:

- 1.1 Product Description
- 1.2 Differences between Models
- 1.3 Terms and Symbols
- 1.4 Safety Precautions

1.1 Product Description

Based on the Android OS, **2N**[®] **Indoor Touch 2.0** helps load third party applications to a device (if enabled so in the device configuration), thus improving its flexibility. It contains a 7" colour LCD display with a capacitive touch layer, loudspeaker, microphone and Ethernet and WiFi interfaces (depending on the Part No.) for LAN connection. Analogue inputs and outputs are also part of the equipment.

2N[®] **Indoor Touch 2.0** has a factory pre-installed application – **2N**[®] **IP Mobile**, which helps establish video calls with any other video call supporting devices (SIP + H.263/4). Primarily, the application is intended for the **2N IP intercom** family.

2N[®] **Indoor Touch 2.0** contains a specific user interface for an increased user comfort and safety.

2N[®] Indoor Touch 2.0 basic features:

- 7" LCD colour display with capacitive touch layer
- Wall mounting option
- LAN interface with PoE supply option
- 802.11bgn WiFi interface (depending on the Part No.)
- Status RGB LED at front
- Binary inputs and outputs for control of other devices
- Android operating system with pre-installed basic applications and own user interface
- Pre-installed **2N[®] IP Mobile** application

1.2 Differences between Models

This manual is valid for all the **2N Indoor Touch 2.0** types. Therefore, please note that several features described in this document are only available in selected models or need to be activated with a licence key. If a feature is not available in all the models, a note is added to the respective subsection.

2N[®] Indoor Touch 2.0 User Manual

1.3 Terms and Symbols

The following symbols and pictograms are used in the manual:

Safety

• Always abide by this information to prevent persons from injury.

Warning

• Always abide by this information to prevent damage to the device.

A Caution

• Important information for system functionality.

🕑 Tip

• Useful information for quick and efficient functionality.

(i) Note

• Routines or advice for efficient use of the device.

1.4 Safety Precautions

The manufacturer reserves the right to modify the product in order to improve its qualities. The manufacturer continuously responds to the clients' requirements by improving the software. Refer to the www.2n.cz company websites for the latest **2N**[®] **Indoor Touch 2.0** firmware and User Manual.

- It is prohibited to use any transmitters, including 2N[®] Indoor Touch 2.0 with an internal WiFi adapter, in areas where explosives are used, such as quarries.
- WiFi adapters may affect sensitive life-saving devices in medical centres. Therefore, it is prohibited to use device with an internal WiFi adapter in such facilities.
- In general, any RF energy radiation prohibition regarding WiFi antenna equipped devices applies to device with an internal WiFi adapter.
- Where necessary, a device unit can be installed at a safe distance from the prohibited area and an Ethernet cable can only be carried to the required site.
- Although the device is not intended for cars or aeroplanes, all prohibitions and regulations relating to adapter equipped devices apply to device too.

2. Description and Installation

This section describes the **2N[®] Indoor Touch 2.0** installation and correct connection.

Here is what you can find in this section:

- 2.1 Before You Start
- 2.2 Brief Installation Guide
- 2.3 Installation Conditions
- 2.4 Status LED
- 2.5 First Startup

The device is designed solely for wall mounting. Install the device with the aid of a holder, which is included in the product and Installation Manual delivery.

Prepare the proper wall fittings (screws and wall plugs suitable for the given wall type and structure). Respect the local standards for installation of electronic devices onto flammable materials while mounting!

Use a cross-point screwdriver for tightening the fitting screws on the device sides to place **2N**[®] **Indoor Touch 2.0** properly.

2.1 Before You Start

Product Completeness Check

Please check the **2N**[®] **Indoor Touch 2.0** delivery before starting installation:

| 1 | 2N [®] Indoor Touch 2.0 |
|---|--|
| 1 | Quick Start manual |
| 1 | Wall holder (screwed to device) |
| 1 | Installation fittings (2 screws, 2 plugs for flush mounting) |
| 1 | Microfiber screen cleaning cloth |

Front Layout

- 1. Glass frame
- 2. LCD display with capacitive touch layer
- 3. Status RGB LED
- 4. Loudspeaker
- 5. Microphone
- 6. Micro SD card slot

Backside Connectors

- 1. RJ-45 LAN 10/100BaseT connector
- 2. 12 V / 2 A DC supply terminal board (only if PoE is not used)
- 3. Restart/Factory reset button
- 4. Binary input/output terminal board (for application control)
- 5. Micro SD card slot
- 6. Logic inputs and outputs

🕑 Tip

• External doorbell button or Relay connection guides are available at faq.2n.cz.

Warning

• Do not remove the backside rubber sealing as it improves the accoustic properties of the product during wall mounting.

2.2 Brief Installation Guide

- Nainstalujte držák zařízení na kolmou zeď. Doporučená výška instalace je 120 cm od úrovně podlahy. Součástí balení jsou šrouby a hmoždinky pro instalaci do cihlové zdi. V případě jiného druhu zdi je třeba použít odpovídající instalační materiál!
- 2. Zařízení lze napájet pomocí ethernet PoE adaptéru (nebo ethernet switch/router s podporou PoE), či pomocí 12 V / 2 A DC napájecího adaptéru.
 - a. V případě PoE napájení pouze zacvakněte RJ-45 do odpovídajícího konektoru.
 - b. V případě 12 V DC / 2 A napájení je třeba přišroubovat plusový a minusový kabel od napájecího adaptéru do odpovídající svorkovnice na zařízení.
 - c. Napájení zařízení oběma způsoby najednou není doporučováno!
- 3. Nasaďte zařízení na připravený držák ve dvou krocích:
 - a. Zařízení nasazujte opatrně shora dolů s mírně odklopenou spodní částí (max. 5 cm) od zdi.
 - b. Po dosednutí zařízení na hlavní nosné prvky držáku přiklopte spodní část zařízení ke zdi.

4. Zašroubujte bezpečnostní šrouby po obou stranách zařízení.

🔒 Upozornění

 Před zahájením mechanické instalace na vybraném místě se pečlivě ujistěte, zda přípravy s ní spojené (vrtání, sekání do zdi) nemohou způsobit narušení elektrických, plynových, vodovodních nebo jiných stávajících rozvodů.

2.3 Installation Conditions

Make sure that the following **2N**[®] **Indoor Touch 2.0** installation conditions are met:

- There must be enough space for device installation.
- Device is designed for vertical wall mounting (perpendicular to the floor) in the height of up to 120 cm above the floor. If necessary, operate device in a position other than as aforementioned for a short time only, for quick testing purposes in a servicing centre, for example.
- Exceeding the allowed operating temperature may not affect the device immediately but leads to premature ageing and lower reliability. Refer to
 <u>6. Technical Parameters</u> for the acceptable range of operating temperatures and relative humidity values.
- Device is not designed for environments with increased vibrations such as means of transport, machine rooms and so on.
- Device is not intended for dusty environments and places with unstable humidity and abrupt temperature changes.
- Device may not be exposed to aggressive gas, acid vapours, solvents, etc.
- Device is not intended for direct connection into the Ethernet/Internet.
- Device must be connected to the Ethernet/Internet via a separating active network element (switch/router).
- Device is designed for indoor use. It may not be exposed to rain, flowing water, condensing moisture, fog, etc.
- Device cannot be operated on places exposed to direct sunshine and near heat sources.
- Keep some free space above and below device to allow air to flow and conduct heat away.
- No strong electromagnetic radiance is allowed on the installation site.
- The VoIP connection must be configured properly according to the SIP and other VoIP recommendations.
- It is recommended that the power adapter be connected to the mains via a UPS and reliable overvoltage protection.

Wall Mounting

2N[®] **Indoor Touch 2.0** is designed for wall mounting. Follow the steps below:

- 1. Unscrew the holder-fitting screws on the device sides.
- 2. Turn the metal holder slightly aside in the upper part of the device.
- 3. Move the holder downwards.
- 4. Fit the loose holder to the wall on the installation site.
- 5. Put the device on the holder and tighten the safety screws.

Follow the installation instructions printed on the device package.

Power Supply Connection

You can feed **2N[®] Indoor Touch 2.0** as follows:

- 1. Use 12 V / 2 A DC power adapter (order no. 91378381E/91378381GB/ 91378381US)connected to the terminal board.
- 2. Use an Ethernet cable connected to a PoE supply or PoE supporting Ethernet switch/ router.

A successful operation is indicated by a status RGB LED or LCD display.

PoE Supply Connection

Use a standard straight RJ-45 terminated cable to connect device to the Ethernet. The device supports the 10BaseT and 100BaseT protocols. The Ethernet connection state is indicated by the LEDs placed on the RJ-45 connector.

Refer to 3.3 Device Configuration for the factory settings of the device Ethernet interface.

\rm **A** Caution

- Factory reset results in a change of the Ethernet interface configuration!
- A defective Ethernet cable may lead to a high packet loss in the Ethernet and subsequent instability and poor video call quality!

🔶 Warning

 Connection of a defective or improper power adapter may lead to a temporary or permanent failure of the 2N[®] Indoor Touch 2.0 unit!

| Ethernet cable connector | Ethernet port |
|---|---|
| 5 6 7 7 7 7 7 7 7 7 7 7 7 7 7 | 4 3 2 1 4 5 1 7 3 Rx 7 4 Unused 8 5 Unused 6 Rx 7 Unused 8 Unused 8 5 0 5 0 5 1 7 1 1 1 1 1 1 1 1 1 1 1 1 1 |

Warning

• This product cannot be connected directly to the telecommunications lines (or public wireless LANs) of any telecommunication carriers (e.g. mobile communications carriers, fixed communications carriers, or internet providers). In the case of connecting this product to the Internet, be sure to connect it via a router.

Licence Limitations

2N[®] Indoor Touch 2.0 can contain time-limited software licences. Refer to 3.3 Device Configuration for details.

Firmware Upgrade

We recommend you to upgrade the device firmware during installation. Refer to www.2n.cz for the latest FW version. Refer to 3.4. Device Upgrade for the firmware upgrade procedure.

2.4 Status LED

Status LED indicates the device states when the LCD display is switched off or the device is in the service mode. See the table below for the LED colours and states:

Device Startup:

| Colour | State | | |
|------------|-----------------------|--|--|
| Blue is on | Device initialisation | | |

2N[®] Indoor Touch 2.0 User Manual

| Colour | State |
|--------------------|--------------------------------|
| Red is on | First boot phase |
| Green is on | Operating system start |
| Yelow is on | Factory setting initialisation |
| Blue is flashing | Factory reset |
| Purple is flashing | System upgrade process |
| No light | Device state is displayed |

Standard Operation:

| Colour | State |
|--------------|---|
| No light | Device state is displayed |
| Blue is on | Stand-by mode (display off) |
| Red flashing | Missed call notification on the device. |
| Other states | Notification of other states of applications running in the system (2N[®] IP Mobile , e.g.). |

2.5 First Startup

When you start the device for the first time, the initial initialisation (longer start) is performed and indicated by the following LED notification sequence: Red \rightarrow Blue \rightarrow Green \rightarrow Boot animation on the screen \rightarrow Introductory system screen.

The introductory screen provides essential information for User Manual saving/reading. Select "Don't show welcome screen and run **2N**[®] **IP Mobile** at next start instead" to deactivate this screen for future system startups.

A Caution

If you do not select the "Don't show welcome screen and run 2N[®] IP Mobile at next start instead" option on the welcome screen before quitting and then enable the 2N[®] IP Mobile launch after the system startup in the Launcher configuration, the application will not be started for technical reasons. Therefore, be sure to disable the welcome screen start to make 2N[®] IP Mobile run automatically after the system startup.

The table below shows the factory values of relevant device parameters:

| Parameter | Value |
|----------------------------------|---|
| IP address | will be assigned by the DHCP server |
| IP mask | will be assigned by the DHCP server |
| IP gateway | will be assigned by the DHCP server |
| Access password to configuration | 2n |
| Administrator password | 2n |
| Time/weather location | Prague, CZ |
| Stand-by switching time | 1 minute |
| SW licence | Basic unlimited licence (or according to the Part No.) |

A Caution

• Change the access password while configuring the device for the first time to avoid unauthorised access to configuration!

System Licence

2N[®] Indoor Touch 2.0 has a factory licence key, which can be time-limited (depending on the Part No.). The licence expiry may cause a partial limitation of the device functionality! Refer to 3.3 Device Settings for the current licence state and licence adding procedure if necessary.

3. 2N[®] Indoor Touch 2.0 Configuration

This section describes the **2N**[®] **Indoor Touch 2.0** configuration.

Here is what you can find in this section:

- 3.1 Factory Reset
- 3.2 Home Screen
- 3.3 Device Configuration
- 3.4 Device Upgrade

3.1 Factory Reset

Follow the steps below to reset the **2N**[®] **Indoor Touch 2.0** factory values:

- 1. Press the Factory Data Reset button in Settings / Administrator mode ON / Backup & reset.
- 2. Remove the device from the installation holder:
 - a. Press and hold the Reset button on the device backside.
 - b. Press and hold the Reset button until the notification RGB LED lights up (yellow, approx. 10 seconds).
 - c. Release the Reset button and follow the instructions displayed.

\rm **A** Caution

- You can reset the factory values only if the administrator mode is on.
- Factory reset results in a complete deletion of all user data.

3.2 Home Screen

The Home Screen is divided into three subsections: Current time and date, Weather widget and five configurable application positions. The Setting and Information buttons are also available here.

Factory settings:

- Time/Date tiles
- Weather tile
- File Manager standard file system application
- Browser Internet browser application
- **Intercoms** application responsible for communication of the 2N IP intercoms with other answering units
- Gallery photo/image processing application

The lower graphic bar includes five graphic controls:

- **Back icon (triangle)** return one level higher or one step back (depending on the application type).
- Home icon (circle) return to the introductory screen.
- **Square icon** switch the currently launched applications.
- **Speaker icons** increase/decrease the system loudspeaker volume.

Notification Bar

| Settings | 10:04 Tuesday, 19 November | | | | | | |
|----------|--------------------------------------|------------------------|---|---------------|-------------------|-------------|--|
| 1 | • | | | ¢ | | Je, CZ | |
| | YouTube_v14 | 1.43.55_apkpure.com.ap | k | | 1 | 0:03 | |
| Tues | sday, November | 19 | | Datta from Op | OVERCASI CLEAR | | |
| | | | | [d⊡ - | | | |
| | File manager | | | | Gallery | | |
| | | \Diamond | 0 | | Ŷ | ب اي | |

The notification bar provides a list of missed events and notifications allowing you to set the DND mode and display brightness level instantly. Swipe your finger in a straight downward line from the upper edge of the screen to pull down the notification bar. Click the Delete all icon to remove the notification list.

3.3 Device Configuration

Click the **Settings** button on the introductory page to access the configuration section. Complete the correct access password.

A Caution

- The factory access password is "2n". If you lose the access data, you will have to factory reset the device! Change the password in the Settings / Personal / Language & input.
- Administrator mode configure advanced functions.

The device configuration consists of five sections: Device, Wireless & Networks, 2N[®] IP Mobile, Personal, System; each section is divided into subsections, see below.

- User Settings
- Administrator Settings

Warning

• You are not recommended to disconnect the device from the power supply within 30 s following the last setting change to avoid loss of the settings.

3.3.1 User Settings

This subsection describes the settings that can be accessed without the administrator password. The subsection contains the following parts:

- 3.3.1.1 Device
- 3.3.1.2 Personal
- 3.3.1.3 System

3.3.1.1 Device

This section helps you set the first menu level and quick navigation parameters (click any subsection) into selected device configuration sections.

| Setti | Settings | | | | |

- **Time** click to move the user to the section for setting the time, time format and time zone.
 - Automatic date & time activate the use of date and time from the network.
 - Set date and time set the date and time manually if Automatic date and time is disabled.
 - **Select time zone** set the time zone for the installation site to include the time shift and summer/winter time transition.
 - Use 24-hour format display the 24-hour format. If disabled, the 12-hour format is displayed including the a.m./p.m. information.
 - **Choose date format** select one of the three available date formats.
- Weather click to move the user to the section for setting the current weather forecast. Use the introductory weather tile to deactivate the function. Deactivate the weather tile if necessary.
 - **Position** set the geographical position of the installation site manually.

- **Refresh frequency** set 60 or 120 minutes for weather info refreshment.
- **Units** set metric (°C) or imperial (°F) units.
- **Source** display the weather info source.

 The weather forecast location includes the town and abbreviated country name. If typed incorrectly, the weather forecast will not be displayed. make sure that the Internet is connected while setting the location. refer to http:// openweathermap.org/ for location codes.

Pre-Installed Applications

- **File Manager** a file management application, which can be replaced with any other application.
- Browser a www navigation tool, which can be replaced with any other application.
- **Intercoms** provides communication with the 2N IP intercoms and other answering units and can be replaced with any other application.
- **Gallery** an image/photo processing application, which can be replaced with any other application
- Add Application add an application from a list and edit its name/icon if necessary.

(i) Note

List of preinstalled applications:

- AXIS Companion Classic
- AXIS Camera Station
- Music
- File Manager
- Clock
- Galery

- E-mail
- Calendar
- Calculator
- Adobe Reader
- Browser
- Intercoms

A Caution

• The application installations depend on the product licensing. Make sure that the **APP** key is active to install an application. Check Settings / Device / Licence after activating the administrator mode for the current licence state.

The License subsection is only available when the administrator mode is active.

- License key display the license key used.
- **Available functions** display the list of available functions depending on the license type purchased.
- **Status** display the license type (limited, unlimited).
- **Remaining hours** display the license remaining hours.
- Change license key change the license key.

A Caution

• The original license key will be overwritten by the new one! Be sure to insert a valid license key obtained from your supplier!

🔶 Warning

The APP licence unlocks 2N[®] Indoor Touch 2.0 for loading user applications from a microSD card (SDHC), up to 16 GB. If, however, any user applications are installed, 2N TELEKOMUNIKACE a.s. does not guarantee a proper function and stability of such user applications and/or a correct function of the applications pre-installed in 2N[®] Indoor Touch 2.0. Should troubles occur, remove the user applications or reset the device factory values to get rid of the user applications and settings.

The Licence subsection is available in the administrator mode only.

Licensed functions

- Meeting Room Launcher switch the home page to the 2N[®] Meeting Room launcher.
- **Default Android Launcher** set the home page to the default Android Launcher.

🔒 Note

- Once the Meeting Room launcher is set, the **2N**[®] **Indoor Touch 2.0** call functions will be deactivated and the application will replace the home screen. All the notifications will be turned down and can be turned on additionally. Once the Meeting Room launcher is turned off, the default audio values will be restored.
- No custom application or URL are launched upon restart while the Meeting Room application is switched on.
- The Meeting Room launcher and Default Android launcher licensed functions are displayed only if the valid licence key is entered.

Aggregate information

- Licence key display the licence key used.
- **Available functions** display the list of available functions depending on the licence type purchased.
- **Status** display the licence status (limited, unlimited).
- **Remaining hours** display the hours remaining before the licence expires.
- Change licence key change the licensed key.

A Caution

• The original licence key will be overwritten with a new one! Enter only the valid licence key obtained from your supplier!

Warning

The APP licence unlocks 2N[®] Indoor Touch 2.0 for uploading custom applications from a max 16 GB microSD card (SDHC). 2N TELEKOMUNIKACE a.s. cannot guarantee functionality and stability of custom applications or proper function of applications pre-installed in 2N[®] Indoor Touch 2.0 once custom applications are installed. In case of troubles, remove the custom applications or reset the factory values. The factory reset shall restore the device's original state without custom applications and settings.

3.3.2.1.1 2N[®] Meeting Room App

The **2N**[®] **Meeting Room** application provides an easy management of meeting rooms. It shows the current and forthcoming events and helps you create a new meeting room reservation directly, thus making the meeting room reservation process more flexible and user friendly.

| Management |
|------------|
| .cz |
| |
| planning |
| LOZ |
| |
| |
| |

To activate the **2N**[®] **Meeting Room** function, add the licence key via the device web interface or directly to the device after logging into the Administrator mode, Device / Licence section.

The basic features of the **2N**[®] **Meeting Room** application include showing events including details and making reservations for selected meetings as well as support of and synchronisation with selected calendars. Support for the display of weather forecast, time and custom logo widgets is also provided.

2N[®] **Meeting Room** supports two modes. The outside (default) mode means that the device with the application is installed in front of the meeting room to show the ongoing and forthcoming events. For the inside mode, the device is installed inside the meeting room to show the remaining time of the current event.

(i) Note

- Application function requirements:
 - 2N[®] Indoor Touch with FW 4.3 version and higher
 - 2N[®] Meeting Room app licence (Part No. 91378396)

Settings - Connection

To display a calendar, the application supports synchronisation with the following shared post/ calendar platforms:

- Microsoft Office 365 (Outlook)
- Microsoft Exchange (via Android system account)
- Gmail (Google Mail/Calendar)
- Zimbra

Refer to the FAQ for how to synchronise the selected calendars with the 2N[®]
 Meeting Room application.

Settings - Personal

| Settings | | |

| ver | sion: 1.3.2 | Possibility to show event details | | |

- **Widgets** use the widgets to display selected information. Press the icon and choose up to 2 widgets (time and date, day in a week, meeting room name, logo) or no widget.
- Events that may be canceled set the event cancelling rules for the application.
 - All any user may cancel all events (all events mean the events created in a shared calendar or by the Ad hoc events created by the application in the device).

- Ad hoc events created by the application may only be cancelled.
- **None** no events may be cancelled.

🔮 Tip

- The Ad hoc reservation is only possible if the meeting room is currently free for up to 60 minutes.
- **Cleaning room option** send a meeting room cleaning request by fulfilling the recipient and a message for the recipient. Once it is saved, the function icon is displayed on the device in the application. Press the icon to send the request to the defined address.
- Event detail display details on the selected event in the event list.
- **Logo** upload and display a selected image/logo by fulfilling the valid image URL address. The supported formats are .jpg/.jpeg, .png, .bmp and .gif (just static display is supported without animation).
- **Inside room mode** activate the application's inside mode for a device installed inside the meeting room to show the remaining time of the current event reserved.
- Automatic confirmation set automatic event confirmation as every event requires user confirmation by default.

| Settings | Settings lock | (() |
|----------------|---|------------|

Settings - General

- **Settings lock** set a PIN code to prevent unauthorised persons from making changes in the application.
- Android settings open the Android settings of the device.
- Date & time switch to the Date and time section in the Android settings.

- ົລ Settings Brightness 630 Set automatic brightness level CONNECTION Ø Screen On Always On PERSONAL Screen On from 3 to 15 GENERAL . . . (. Device information IP(v4): 10.0.24.87 IP(v6): FE80::7E1E:B3FF:FE03:1A71 MAC: 7C:1E:B3:03:1A:71 Logging Enabled ())) Enable to save logs into the device. version: 1.3.2
- Intro display a brief application survey.

- **Brightness** enable automatic adaptation of the display brightness level to the day/night time. The default brightness setting is the same as in the system.
- Screen On choose whether the display shall be active all the time showing the meeting room information continuously, or whether the display shall be activated for a time period between the start and end points defined on the time line.
- **Device information** display the device info.
- Logging enable enable device logging. This function gives the technical support staff access to the device logs for troubleshooting purposes.

🕑 Tip

• Refer to the FAQ for a detailed screen description of an active **2N**[®] **Meeting Room** application.

i Note

- The meeting room status is also indicated by the 2N logo backlight LED colour on the device:
 - Green free
 - Red occupied
 - Orange waiting for meeting confirmation

Warning

• Once the **2N**[®] **Meeting Room** application is activated, the unit does not answer any calls and **2N**[®] **Meeting Room** is the only application running on the unit. The reason why **2N**[®] **Indoor Touch 2.0** cannot be called while the application is active is to avoid unwanted calls and keep the meeting room events displayed all the time. The application always runs on the foreground and you can deactivate it either directly in the device settings after switching to the administrator mode or via the device web interface.

3.3.2.2 Wireless & Networks

This section helps you set the network connection parameters. Connection can be set via Ethernet or Wi-Fi (depending on the Part No., refer to Subs. 1.2 Differences between Models and Associated Products).

| Wireles | ss & networks | | |
|--------------|---------------------------|---|-------|
| {·· > | Ethernet | Ŷ | Wi-Fi |
| <u>₽</u> | Advanced network settings | | |

- Wi-Fi disable/enable the Wi-Fi connection.
- Ethernet disable/enable the Ethernet connection.
- Advanced network settings display the network connection mode.

```
(i) Note
```

- Ethernet can be used together with Wi-Fi.
- By disabling the Ethernet connection you do not switch off the device when PoE is used.

| | | | | ↔ 09:21 |
|----------------------------------|--------------------|---|----|---------|
| ← Ethernet | | | | |
| Enabled | | | | • |
| Use DHCP | | | | • |
| IP Address 10.0.24.24 | | | | |

| Configuration | | | | |
| | | | | |
| | | | | |
| | | | | |
| | \bigtriangledown | 0 | Ц, | L)» |

The Wi-Fi section displays the list of available Wi-Fi networks.

- **Enabled** enable/disable the adapter.
- **Use DHCP** enable/disable the DHCP client.
- **IP Address** display the IP address.
- MAC Address display the MAC address.
- **Configuration** configure the Ethernet manually.

- Connection to two networks simultaneously display the Ethernet + Wi-Fi connection state.
- **Connection type** display the Internet connecting network.

3.3.2.3 Security

This subsection describes the administrator security settings.

PASSWORD

- **Setting password** set the access password type for the Settings:
 - **None** no access password is required.
 - **Password** set a password containing at least four letters.
 - **PIN** set a code containing at least four digits.
- Administrator and web access password set the administrator mode and web interface access password.
 - Use separate web access password set separate passwords for the administrator mode and device web interface.
 - Administrator password set the administrator access password.

• Web access password – set the web interface access password.

| | Screen security |
|---|---|
| | Screen lock None |
| S | CREEN LOCK |
| | Screen lock – set the screen lock password type. The screen lock is activated after |
| | the sleep mode timeout set in the Device / Screen / Sleep mode menu elapses. |
| | None – no screen lock. |
| | Pattern – set the screen lock deactivation gesture. |
| | |

• **PIN** – set the numeric PIN for screen lock deactivation.

Unknown sources
Allow application installation from unknown sources

UNKNOWN SOURCES

• Allow application installation from unknown sources – allow installation of applications from unknown sources.

3.3.2.4 Language & input

This subsection describes the administrator options.

| | | \leftrightarrow | 04:29 |
|------------------|------------------------------------|-------------------|-------|
| ÷ | Language & input | | |
| Langı Englist | uage h (United Kingdom) | | |
| | checker id Spell Checker (AOSP) | | |
| Perso | onal dictionary | | |

- Language set the language for the texts to be displayed.
- **Spell checker** enable/disable the spell checker function.
- **Personal directory** add terms of your own including optional abbreviations to the dictionary.

KEYBOARD & INPUT METHODS

- **Current Keyboard** set the keyboard type.
- Android Keyboard (AOSP) set the additional parameters of the Android keyboard.

3.3.3 Intercoms

This subsection describes how to configure the pre-installed **Intercoms** application.

- 3.3.3.1 General Settings
- 3.3.3.2 Call Settings
- 3.3.3.3 My2N/SIP Configuration
- 3.3.3.4 Video
- 3.3.3.5 Recorder
- 3.3.3.6 Input and Output

A Caution

• The Intercoms application is deactivated while the device is in the Meeting Room launcher mode.

3.3.3.1 General Settings

This section helps you set the Intercoms general parameters.

| | | | | | <⇒\\? | 1:52 p.m. |
|---------------|-----------------------------|--------------------|---|---|-------|-----------|
| ÷ | General Settings | | | | | |
| Gene | al | | | | | |
| Devi 2Nind | e ID corTouch-5221010046 | | | | | |
| Pass *** | word | | | | | |
| Acce *** | ss key | | | | | |
| | snapshot ntly ON | | | | | |
| | to talk ntly OFF | | | | | • |
| Local | ization | | | | | |
| Cust | annuane | | | | | 0 |
| | | \bigtriangledown | 0 | Ъ | ŝ | |

GENERAL

- **Device ID** set the device name for **2N**[®] **IP Mobile** identification to other LAN devices.
- **Password** set the application setting password via link click from the application.
- Access Key set the 2N IP intercom authentication password.

🕑 Tip

- Refer to faq.2n.cz for the **Access key** instructions for use.
- Autosnapshot enable/disable Autosnapshot to acquire an image from the video preview. The image replaces the circle avatar at the added devices in the Device and Call Log menus.
- **Push to Talk** select the communication type for one-directional halfduplex communication: ON/OFF (ON by default).
- Multicast Discovery ON/OFF (ON by default). With ON, 2N[®] Indoor Touch 2.0 sends the info packets to the network in the multicast mode. With OFF, 2N[®] Indoor Touch 2.0 sends the info packets in unicast to the IP address of the 2N IP intercom to be monitored and periodically to all the 2N IP intercoms included in the LAN device list. The info packets are sent in unicast to the 2N IP intercoms only, not to other 2N[®] Indoor Touch 2.0 LAN devices.

LOCALIZATION

• **Custom language** – use custom modified texts, which are not part of the application package. Use JSON strings to set the language.

The custom translations are optionally available in the translationMap.json file in an external storage (physical or emulated SD card), which matches the following path:

/sdcard/hipmo-localization/translationMap.json.

The hipmo-localization folder is automatically created on the first available SD card upon the application start. If there are multiple SD cards in the device and you do not know which to use, check the SD cards for the folder upon startup.

\rm A Note

• Make sure that the file name is "**translationMap.json**" without any additional (language) extensions or insertions. For example, translationMap-cs.json is wrong.

Text File Structure

The custom translation JSON includes the data root, which is an array of translation elements:

{"data":[

translation,

translation,

•••

translation

]}

Each translation element has the following structure:

{"key":{"hint":"hint_string","value":"translated_string"}}

where

- **key** text string key (replaces name in strings.xml).
- **hint_string** text meaning.
- **translated_string** custom translation.

Example:

{"title_call_declined":{"hint":"Call declined","value":"Call declined"}}

You are recommended to edit translated_string only and not modify hint_string unless necessary.

Warning

• We do not advise you to edit the **KEY** text string to avoid unexpected actions of the application.

The application searches the asset for a file that matches the current Locale setting in the device. If there is one, the application adds the keys included in the file to the map. Should there be a match, old values are replaced with new ones.

The application checks the Custom Localization switch status. If the function is on and the corresponding custom translation file is available in the device, the application adds the keys to the map as mentioned above.

A Caution

• Untranslated strings are displayed in English.

3.3.3.2 Call Settings

This section helps you set the call parameters.

| | | | | | {· → | 00:14 |
|-----------------|---|-----------------|---|---|-------------|-------|

| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | \triangleleft | 0 | ц | √ » | |

CALL

- **Call ringtone** select the **2N**[®] **IP Mobile** default ringtone.
- **Custom ringtone file** load an audio file to be used as the ringtone. The supported format is .wav, 15 MB, shortened to 15 s, PCM8/PCM16.
- Automatic call pickup set the automatic incoming call answering.
 - Automatic call pickup delay set the automatic call pickup timeout to 0–20 seconds.

3.3.3 My2N/SIP Configuration

This section helps you set the My2N and SIP Proxy parameters.

| | 3-3-3- | ↔ 00:46 |
|-----------------------------------|--------|---------|
| ← My2N/SIP Configuration | | |
| My2N | | |
| My2N Mobile Video Currently ON | | • |
| Device ID | | |
| Password *** | | |

MY2N

- My2N Mobile Video enable/disable 2N[®] IP Mobile.
- **Device ID** set the device ID assigned by **2N**[®] **IP Mobile**.
- Password set the device password for 2N[®] IP Mobile connection, generated automatically.

| | | | | <i></i> | 00:46 |
|------------------|--------------------------|---|--------|----------|-------|
| ÷ | - My2N/SIP Configuration | | | | |
| Si | p Proxy | | | | |
| SI Ci | IP Proxy urrently ON | | | | • |
| Di Ini | isplay name doorTouch | | | | |

| P: | assword * | | | | |
| | erver 92.168.1.1 | | | | |
| | ort 060 | | | | |
| | \Diamond | 0 | り り | り | |

SIP PROXY

- **SIP Proxy** enable/disable the SIP Proxy.
- **Display name** set the account name to be displayed in the application.
- **Username** set the SIP Proxy server username.
- **Password** set the SIP Proxy server user password.
- **Server** set the SIP Proxy server IP address/domain name.
- **Port** set the SIP Proxy server port (default is 5060).
- **Transport** select the transport protocol: TCP or UDP.

SIP REGISTRAR

| | ⇔ | 00:46 |
|---------------------------|---|-------|
| ← My2N/SIP Configuration | | |
| SIP Registrar | | |
| Registrar Currently ON | | • |
| Address | | |
| Port | | |
| Registration Expiry | | |

- Registrar set the SIP Proxy IP address or domain name.
- Address set the SIP Registrar IP address or domain name.
- **Port** set the SIP Proxy port (typically 5060).
- **Registration Expiry** define the registration expiry, which affects the network and SIP Registrar load by periodically sent registration requirements. The SIP Registrar can modify the expiry limit without letting you know.

| Ports | |
|--|---|
| SIP port randomization Currently ON | • |
| Port 50684 | |

PORTS

- **SIP port randomization** a randomly generated port where the application listens. When the setting is changed, re-registration with the SIP Proxy or My2N is made.
- **Port** set the selected SIP port manually if SIP port randomisation is enabled.

🕑 Tip

• Refer to faq.2n.cz for SIP Proxy call settings.

Warning

• The SIP Proxy and My2N modes cannot be operated at the same time.

3.3.3.4 Video

This section helps you set the video parameters.

| | | | | | <i></i> | 01:05 |
|------------------|---------------------------------|--------------------|---|---|---------|-------|
| ÷ | Video | | | | | |
| Video | | | | | | |
| Multio Currer | | | | | | • |
| Autor 2 minu | natic video stream deactivation | | | | | |
| Early Currer | media tły ON | | | | | • |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | \bigtriangledown | 0 | り | り の | |

VIDEO

- Multicast select the video stream transmission type from a 2N IP intercom.
- Automatic video stream deactivation set the time during which the video stream preview of the 2N IP intercom selected in the Device section is displayed.
- **Early media** enable/disable video stream transmission during an incoming call ringing from the devices registered with the SIP Proxy.

🕑 Tip

• Refer to faq.2n.cz for Multicast/Unicast details.

3.3.3.5 Recorder

This section helps you set the recorder parameters.

| | | | 5- | ↔ 01:07 |
|-----------------------------|-----------------|---|----|---------|
| ← Recorder | | | | |
| Recorder | | | | |
| Recorder Currently ON | | | | |
| Recorder activation timeout | | | | |
| Recorder announcement | | | | |
| File | | | | |
| Record custom announcement | | | | |
| Play actual announcement | | | | |
| | | | | |
| | \triangleleft | 0 | Ц | L) |

RECORDER

- Recorder enable/disable the recorder function.
- **Recorder activation timeout** the recorder is activated after the set incoming ringing timeout elapses.
- **Recorder announcement** set the announcement to be played.
 - **Default announcement** part of the **2N**[®] **IP Mobile** package.
 - Announcement from file select an announcement from a file.
 - Recorded announcement select an announcement loaded in the Load user announcement section of 2N[®] IP Mobile.
- File display the file directory structure.
- **Record custom announcement** use this function to load an announcement of your own to be played by the recorder. The supported format is .wav, 15 MB, shortened to 15 s, PCM8/PCM16.
- **Play current announcement** play the currently set and active announcement.

(i) Note

• The maximum recorder announcement length of time is 20 s.

A Caution

• If you enable the **Recorder**, the call is answered and recorded **via 1 device only**. If you set the **Recorder** for two or more devices in one LAN or called group, the call is answered and recorded via the device that was the first to pick up the call (if the same Recorder activation timeout is set for all the devices), or via the device that is assigned the lowest **Recorder activation timeout**. In heavy-traffic networks, there may be a delay during call setups and so it cannot be guaranteed that the call will be picked up and recorded by one and the same device.

3.3.3.6 Input and Output

This section helps you set the input/output parameters.

- **Doorbell ringtone** choose the default user doorbell ringtone. The tone length is set to 10 s at doorbell activation.
- **Ignore DND setting for inputs** allow this parameter to ignore the DND mode at input activation.
- **Ignore DND setting for outputs** allow this parameter to ignore the DND mode at output activation.

Input / Output Configuration – define which input is related to which output and specify its function.

- **Application reacts to the following inputs** select the input to be used, both the inputs can be used simultaneously.
 - **Input 1,2** activate the doorbell button input.
- **Application reacts to the following outputs** select the output to be used, both the outputs can be used simultaneously.
 - **Output 1,2** activate the doorbell device input, e.g. for light, siren, speaker.
 - **Incoming call notification** when the doorbell button is pressed, a notification is displayed on the device and acoustic signaling is activated.

2N[®] Indoor Touch 2.0 User Manual

- Activation option at incoming call when the doorbell button is pressed, a
 notification is displayed on the device, acoustic signaling and the remote
 control option becomes available for activation of connected input locks as
 set for the user.
- use the pencil icon to give user names to the inputs and outputs.

🕑 Tip

- Make sure that the wiring diagram shown on the device motherboard is kept to make the system work properly. Refer to Subs. 2.1 Before You Start for motherboard details.
- Refer to here for doorbell button connection details.
- Refer to here for relay connection details.

(i) Note

• All doorbell calls including the incoming and missed notifications are stored in the call list.

A Caution

- If a user fails to unlock the door lock during the ringing notification, the lock can be opened subsequently in the missed event detail in the call list.
- A collision occurs whenever both the doorbell buttons are pressed sequentially within 10 s. When the second doorbell button rings while the first doorbell button is being notified, a notification is displayed providing the option to activate the connected inputs or hiding the notification by pressing OK. After the hiding or input activation confirmation, the user returns to the notification of the first doorbell button pressed.
- When both the inputs are activated and one and the same doorbell button is repressed within 10 s, the first notification is included as missed in the call list.

3.4 Device Upgrade

There are two ways how to upgrade **2N**[®] **Indoor Touch 2.0**: using an SD card or via the device web interface.

SD card upgrade procedure:

- 1. Download the latest **2N[®] Indoor Touch 2.0** Full Upgrade firmware from www.2n.cz.
- 2. Get a microSD card of the maximum capacity of 16 GB and with the FAT32 file system.
- 3. Copy the downloaded *.ZIP firmware into the root directory of an attached SD card (naming the file **upgrade.zip**).

- 4. Insert the SD card in the SD card slot on the left side of **2N**[®] **Indoor Touch 2.0** (refer to 2.1 Before You Start).
- 5. Reset the device as follows:
 - a. Press the backside Reset button shortly (refer to 2.1 Before You Start), or
 - b. Press the Restart button in the System / Data Backup and Recovery configuration section.
- 6. If **2N**[®] **Indoor Touch 2.0** detects the right file, the upgrade process will run automatically. If not, an error message is displayed.
- 7. Remove the SD card after the upgrade is complete and choose one of the following options:
 - a. Click the display to restart the system.
 - b. Hold your finger on the screen for 5 seconds to reset the factory values.

Warning

- Never remove the SD card during upgrade to avoid device damage.
- If you want to interrupt the upgrade process, do it within the first 10 seconds as invited. Upgrade cannot be aborted later. Remember to remove the SD card after upgrade abort to avoid upgrade re-attempt upon the next startup!

Web interface upgrade procedure:

- Download the latest 2N[®] Indoor Touch 2.0 firmware from www.2n.cz.
- 2. Expand the package downloaded.
- **3.** Enter the device IP address into the browser address row to enter the **device** web interface.
- 4. Log in and go to the Maintenance tab.
- 5. Select Firmware upgrade and load the *.zip file included in the firmware package in the wizard.
- 6. Having completed file loading and verifying, click Upgrade.
- 7. The device will get restarted and upgrade will be executed automatically.

A Caution

- The upgrade process may take up to 10 minutes or more.
- Never disconnect the device from the electric power supply during upgrade to avoid device damage!
- The first system startup after a successful upgrade may take up to a few minutes.
- User data is not deleted during the upgrade process.

4. Intercoms Apllication Configuration

This section describes configuration of the pre-installed **Intercoms** application.

Here is what you can find in this section:

- 4.1 Application Description
- 4.2 Application Environment and Configuration
 - 4.2.1 Device
 - 4.2.2 Call Log
 - 4.2.3 Dial Pad
 - 4.2.4 Settings
- 4.3 Notifications in 2N[®] Indoor Touch Environment
- 4.4 Application Use
 - 4.4.1 LAN Calls
 - 4.4.2 SIP Proxy Server Calls
 - 4.4.3 2N[®] Mobile Video Calls
- 4.5 Supplementary Information
 - 4.5.1 Troubleshooting

4.1 Application Description

2N[®] IP Mobile is an application designed for video calls between the 2N IP intercoms and 2N[®] Indoor Touch 2.0 devices.

2N[®] IP Mobile is part of the 2N[®] Indoor Touch 2.0 firmware.

2N[®] IP Mobile sets up calls between the 2N[®] Indoor Touch 2.0 devices.

2N[®] IP Mobile sets up calls between a Smartphone and 2N[®] Indoor Touch 2.0 device.

2N[®] IP Mobile sets up calls via the **2N[®] Mobile Video** cloud solution.

2N[®] **IP Mobile** sets up SIP Proxy calls for other SIP supporting devices and applications.

A Caution

• Always use the latest firmware in your **2N IP intercom** or **2N**[®] **Indoor Touch 2.0** device to make the application work perfectly!

4.2 Application Environment and Configuration

Once launched, **2N**[®] **IP Mobile** displays the Device screen:

| Device | |
|------------|------------|
| Call Log | |
| Keypad | |
| 🔯 Settings | No devices |
| | |
| | - |

The main menu includes the following items:

- Device list of added devices: 2N IP intercoms, 2N[®] IndoorTouch 2.0, 2N[®] Mobile Video or, if SIP Proxy is used, any other SIP supporting device.
- **Call Log** list of all accomplished incoming/outgoing calls.
- **Keypad** dial a station number manually to set up a call if the application is registered with a SIP Proxy server.
- Settings 2N[®] IP Mobile settings.

🕑 Tip

The 2N[®] IP Mobile settings are available via the 2N[®] IndoorTouch 2.0 configuration interface too.

4.2.1 Device

The Device section helps you add the **2N IP intercoms**, **2N**[®] **Indoor Touch**

2.0 devices, **2N**[®] **Mobile Video** devices and devices registered with the same SIP Proxy server. The **2N IP intercoms** and **2N**[®] **Indoor Touch** devices are detected in the LAN automatically via **2N**[®] **IP Mobile**. The devices that are connected to another LAN need a SIP Proxy server and have to be added manually. You can combine adding devices from groups (LAN / Proxy / My2N).

Note

The application does not provide simultaneous SIP Proxy server and 2N[®] Mobile Video connections. Therefore, the added devices are switched too. The SIP Proxy account connection, SIP Proxy device creation and device adding make these devices saved. Once connected to 2N[®] Mobile Video, the application remembers these devices and adds them to the device list after SIP Proxy reconnection. The added LAN devices are always visible in the Device menu.

Device Adding

Click the containing the right-hand bottom corner of the Device main window to enter the device adding menu.

LAN Devices

All the **2N IP intercoms** and **2N**[®] **Indoor Touch 2.0** devices detected automatically in the same LAN are displayed in the Device/LAN main window. Click a row to remove the selected device. Each device is identified by a name and IP address. The selected device is marked **2**. Press **1** to the right in the application upper toolbar to select all the devices listed. Click **2** to edit the device name.

Click device name.

| Device ID | | |
|---------------------|---|------|
| 2N IP Verso | | |
| | | |
| Unlock buttons | | Lift |
| | | |
| Action up 1 enabled | • | |
| | | |
| Action up 2 enabled | • | |
| | | |
| Action up 3 enabled | | |
| | | |
| Action up 4 enabled | | |

- **Device ID** device identification.
- **Unlock buttons** list of device buttons.
 - Action up 1-4 enabled define the button(s) to be displayed.
 - Lift select this option to display the selected button only during the call as a lift icon.

| External camera settings | |
|--------------------------|---|
| Enabled | ۰ |
| IP/Domain | |
| Username | |
| Password | |
| Primary | |

External camera settings – enter the parameters for external Axis camera connection.

- Enabled enable the external camera settings.
- **IP/Domain** set the Axis camera IP address/domain name.
- **Username** set the Axis camera video stream login username.
- **Password** set the Axis camera video stream login password.
- **Primary** select the primary display: external camera or default video stream.

HTTP Protocol O HTTPS Protocol

• HTTP Protocol / HTTPS Protocol – set the authorisation protocol.

Click to the right in the upper panel to save the selected LAN devices. The application moves back to the Device menu to display the selected devices.

Proxy Devices

To become a SIP Proxy device, the device has to be registered with a SIP Proxy server.

🔒 Note

• The application does not allow you to add, create or edit a SIP Proxy device unless correctly connected to a SIP Proxy server.

Proxy Registration

2N[®] **IP Mobile** and SIP supporting devices can communicate with each other only if registered with the same SIP Proxy server.

Click the row marked with it to redirect the application to the My2N/SIP configuration menu. Set the SIP Proxy state to ON and edit the SIP Proxy server connecting parameters. Refer to 4.2.2 SIP Proxy Server Calls for details.

Set the parameters correctly to complete the **2N**[®] **IP Mobile** registration with a SIP Proxy server. Check the notification icon in the Device main menu for the registration status:

1. 🔁 – The application has been successfully registered with a SIP Proxy server.

- 2. O The application is trying to register itself with a SIP Proxy server, yet unsuccessfully so far.
- 3. Solution The SIP Proxy server registration is inactive due to the SIP Proxy server rejection or unavailability.

\rm **A** Caution

• The **2N**[®] **IP Mobile** application requires 60 s as the minimum registration expiry time. If the expiry time is shorter, the application may keep disconnecting from the SIP Proxy server.

Proxy Device Adding

Once **2N**[®] **IP Mobile** is successfully connected to and registered with the SIP Proxy server, you can add SIP Proxy devices to the list manually. Again, click in the right-hand bottom corner of the Device main window to enter the device adding mode. Then use the tab below the application title row to switch the window to Proxy devices.

The selected device is marked . Click to the right in the application upper toolbar to select all the devices listed. Click to edit the device name. Click to save the selected Proxy devices. The application moves to the Device menu to display the selected devices.

| | | | | | | € .} | 12:59 |
|----|----------|--------------------|---------------|-------------|---------------|--------------|-----------|
| | | | Device | | | \checkmark | \square |

| | DT MF4 00* | | | | |
| | External carr | era settings | | | |
| | Enabled | | | | - |
| | \bigtriangledown | 0 | | Ŷ | り |

Click 🕒 to add a SIP Proxy device.

Complete the following parameters:

- **Device name** set the device name for identification in **2N**[®] **IP Mobile**. Used for application only.
- SIP line set the line to be dialled by 2N[®] IP Mobile for an outgoing call.
- **DTMF1-4** set the DTMF to be sent when lock 1-4 is pressed. Used primarily for DTMF sending to the **2N IP intercoms** and unlocking.
- External camera settings enter the parameters for external Axis camera connection:
 - Enabled/Disabled
 - IP/domain set the Axis camera IP address/domain name.
 - Username set the Axis camera video stream login username.
 - Password set the Axis camera video stream login password.
 - Primary select the primary display: external camera or default video stream.
 - HTTP/HTTPS Protocol select the communication protocol.

My2N Devices

The My2N devices are devices from **2N**[®] **Mobile Video**. Like the SIP Proxy devices, the My2N devices cannot be added to the device list until the application is connected to the cloud at www.my2n.com.

Caution

Make sure that a web account and one 2N[®] Indoor Touch 2.0 device at least have been created to make use of the 2N[®] Mobile Video functions. Refer to faq.2n.cz for more details.

Warning

When the 30-day Trial licence expires, purchase a licence corresponding to the count of created devices. If you fail to do so, you will not be able to log in to 2N[®] Mobile Video and use cloud calls.

Connection to Service

Use the application settings for **2N**[®] **Mobile Video** connection. Find the main menu Settings and turn the switch to Enabled to activate the My2N Mobile Video login row. Refer to 4.2.3 Calls via 2N[®] Mobile Video for more details.

| | | | | <-> 10:58 |
|-----------------------------------|--------------------|---|---|------------|
| ← My2N/SIP Configuration | | | | |
| My2N | | | | |
| My2N Mobile Video Currently ON | | | | |
| Device ID | | | | |
| Password | | | | |
| Sip Proxy | | | | |
| SIP Proxy Currently OFF | | | | |
| Display name IndoorTouch | | | | |
| Usemame | | | | |
| | \bigtriangledown | 0 | Ŷ | 心 》 |

Upon login, the Phonebook (device list) set for this device on the service web is downloaded to the application and displayed in the My2N devices, which replaces the Proxy devices. The Phonebook is also added automatically to the Device menu.

The application indicates the **2N**[®] **Mobile Video** server connection using an icon next to the devices tab:

1. So – The application has successfully downloaded all the data and is registered with a **2N**[®] **Mobile Video** SIP Proxy server.

- 2. On the application has successfully downloaded all the data and is trying to register itself with a **2N[®] Mobile Video** SIP Proxy server, yet unsuccessfully so far.
- 3. 🔁 The application failed to connect to the **2N**[®] **Mobile Video** servers.

My2N Device Adding

Once **2N**[®] **IP Mobile** is successfully connected to and registered with **2N**[®] **Mobile Video**, the Phonebook download is displayed in the Device menu. You can edit the device names or remove a device from display in the Phonebook. Again, click in the right-hand bottom corner of the Device main window to enter the device adding mode. Then use the tab below the application title row to switch the window to My2N devices.

The selected device is marked . Click to the right in the application upper toolbar to select all the devices listed. Click to edit the device name. Click to save the selected My2N devices. The application moves to the Device menu to display the selected devices. Press

🞯 to redownload the Phonebook without relogging from the application.

i Info

• You can only edit the My2N device name displayed in the application. The name change does not affect the device name on the service web.

4.2.2 Call Log

The **2N**[®] **IP Mobile** Call Log section displays the records of outgoing/incoming calls. The following values are available:

- Doutgoing outgoing call
- C incoming incoming call
- missed missed call

The call icon is either a snapshot from the device or an avatar. The avatar is displayed when the Autosnapshot parameter is inactive for cameraless devices or when no snapshot was made due

to a short video preview – the ringing time is set behind the bell icon (^{b00:10}). Click I to make a callback. If the recorder is active, click I to play the incoming call record. Use the trash bin in the right-hand upper corner to delete the records.

🔒 Note

- A snapshot is only made when the video stream preview is active for about 3 seconds.
- The maximum count of Call Log items is 30 records.
- When the list is full, the oldest record is automatically deleted and replaced with the latest record.

Select a record to be shown. The records include the call length and an enlarged snapshot. Play

the missed call record if available. Click in the right-hand upper corner to export a record to a storage.

2N[®] Indoor Touch 2.0 User Manual

A Caution

• Unanswered outgoing/incoming calls have a 0:00 call duration.

🕑 Tip

• Refer to faq.2n.cz for the recorder instructions for use.

4.2.3 Dial Pad

The Dial Pad menu helps you call SIP devices by dialling the called number via a SIP Proxy server. When **2N**[®] **IP Mobile** is not registered with the SIP Proxy, the dial pad is inactive.

Once **2N**[®] **IP Mobile** gets registered with the SIP Proxy, the Dial Pad function becomes active.

When a call is ringing via the dial pad, the avatar is displayed in case the called device does not support video stream transmission. If the called device supports video transmission, the video stream is displayed in the same way as if the call were made from a device added to the device list.

A Caution

• The Dial Pad does not allow tone signalling (DTMF) to be sent during a call.

4.2.4 Settings

Refer to 3.3.3 Intercoms for application settings.

4.3 Notifications in 2N[®] Indoor Touch Environment

2N[®] IP Mobile uses a **2N[®] Indoor Touch 2.0** notification LED. The LEd starts flashing red to indicate that:

• There is an unread incoming call in the application.

4.4 Application Use

This subsection provides basic instructions on how to put the application in operation for typical use.

- 4.4.1 LAN Calls
- 4.4.2 SIP Proxy Server Calls
- 4.4.3 2N[®] Mobile Video Calls

4.4.1 LAN Calls

To communicate with an **2N IP intercom**, it is necessary to change a setting in the door communicator to be connected. Refer to the online Configuration manual for 2N IP intercoms or **FAQ**:

2N[®] IP Mobile v4 – How to set communication between Indoor Touch/IP Mobile and 2N IP intercom?

4.4.2 SIP Proxy Server Calls

To make calls via a SIP Proxy server set the application server connection correctly in the SIP Proxy section of the Settings menu. Get the login data from the SIP Proxy server provider.

Once connected, you can dial other devices directly from the application Dial Pad or create a SIP

Proxy device, click it to display the device card and start calling. Click Start calling. Click the field to send the set DTMF code to the device.

🔮 Tip

• Press and hold the lock button to display the lock list (locks 1–4) to control all the locks (not only the default one).

A Caution

- It is impossible to send the DTMF code from the application outside a call for technical reasons. Therefore, if you press the lock outside a call in the SIP Proxy mode, a call is set up first during which the DTMF is sent automatically.
- If the 2N IP intercom and the application are in one and the same LAN, the incoming call is always identified as a LAN call even if it goes via a SIP Proxy server. If you require SIP Proxy identification and the application and 2N IP intercom share one and the same LAN, set a different Access Key password in the application.

🕑 Tip

• Refer to faq.2n.cz for more details on SIP Proxy server calls.

4.4.3 2N[®] Mobile Video Calls

It is very easy to set the application for calling via **2N**[®] **Mobile Video**. All you have to do is set correct login data in the application settings:

Having completed the login data, press the Log in button for the application to log in and download contacts. Then select a device from the list and make a call.

Refer to faq.2n.cz for how to get login data for the **2N**[®] **Mobile Video** servers.

🔮 Tip

- Press and hold the lock button to display the lock list (locks 1–4) to control all the locks (not only the default one).
- Click the name of the 2N IP intercom added using Phonebook via My2N to set up a call with the device immediately. During the call, the microphone on the application side is muted so that the visitor cannot hear you. This mode is suitable for remote silent monitoring of the space in front of the door. This mode is only available to the 2N IP intercoms. Standard calls can only be made to other applications or the 2N[®] IndoorTouch devices.

A Caution

- It is impossible to send the DTMF code from the application outside a call for technical reasons. Therefore, if you press the lock outside a call in the SIP Proxy mode, a call is set up first during which the DTMF is sent automatically.
- If the **2N IP intercom** and the application are in one and the same LAN, the incoming call is always identified as a LAN call even if it goes via a SIP Proxy server. If you require SIP Proxy identification and the application and **2N IP intercom** share one and the same LAN, set a different **Access Key** password in the application.
- Earlymedia is always enabled for the My2N mode. This means that the calling door unit video is displayed by the application during ringing.

4.5 Supplementary Information

This subsection provides supplementary information on the **2N**[®] **IP Mobile** product. Here is what you can find in this subsection:

• 4.5.1 Troubleshooting

4.5.1 Troubleshooting

Question: The application cannot see any devices in the LAN mode.

• **Answer:** Check whether your device and the other devices share one and the same LAN. If so, check the settings of the other devices, particularly the **Access Key** password. Make sure that there is a password match for all the listed devices.

Question: The application sees a 2N IP intercom in the LAN but cannot call it.

• **Answer:** Check whether automatic rejection of incoming calls is enabled in the **2N IP intercom**. Find this setting on the device web interface in the Services / Telephone / Calls section. Make sure that automatic receiving of calls on SIP1 line is enabled.

Question: The application video quality is low or video playing is jerky.

• **Answer:** If you are not satisfied with the video quality, set a higher video transmission rate and resolution for your **2N IP intercom**. If your video transmission is jerky or yielding artifacts, your LAN is probably overloaded. Try to earmark a larger bandwidth for VoIP communication on your router or acquire a router that supports the latest Wi-Fi standards (802.11n / 802.11ac). The function may not be ideal with 802.11g.

If your questions still remain unanswered, use the following link please:

Nejčastěji řešené problémy najdete na stránkách faq.2n.cz.

If you are 2N's registered partner or distributor, you can use the Technical Support portal at support.2n.cz.

5. Web Interface Configuration

2N[®] Indoor Touch allows the user to configure a majority of launcher and 2N[®] IP Mobile parameters via the web interface.

Here is what you can find in this section:

- 5.1 Login
- 5.2 System Info
- 5.3 Device
- 5.4 Application
- 5.5 Limitations

5.1 Login

Enter the **2N**[®] **Indoor Touch 2.0** IP address into the web browser address row to connect to the web interface. The currently supported browsers are Internet Explorer, Google Chrome, Firefox and Opera.

Then enter the user name and password to access the configuration section. The default values are as follows:

- User Name: Admin
- **Password:** 2n (or a valid configuration password in **2N**[®] **Indoor Touch 2.0**)

Caution

- An excessively high count of login attempts limits the web interface accessibility for 30 s. After that, it will be possible to relog in.
- If **2N**[®] **Indoor Touch 2.0** is allowed to access configuration without a password, then the web interface password is identical with the last-used password and can be changed.

5.2 System Info

This subsection includes relevant system information.

Contents:

• 5.2.1 Status

5.2.1 Status

The Status screen displays a list of basic parameters.

| Indoor Touch 2.0 | Device Info | | | Storage | | |

Information on Device

- System device name
- HW version device HW board version
- FW version device firmware version
- Up time total time since the first startup
- Serial number device serial number
- OS version operating system version and type
- Time since last restart time that passed since the last restart
- Temperature current device temperature

Network

- Ethernet stav ethernetu
- DHCP on DHCP status
- IP mask IP mask address
- DNS IP DNS IP address
- Wi-Fi MAC Wi-Fi module MAC address
- IP address IP address
- IP gateway IP gateway IP address
- LAN MAC Ethernet module MAC address
- Wi-Fi support Wi-Fi module availability in the device

- Connection to two networks simultaneously informace o stavu připojení
- Connection type primární rozhraní

Storage

- **RAM** information on the installed, available and used RAM
- **Internal storage** information on the total and free capacity of the device internal storage
- **SD card** information on the total and free capacity of the SD card

Date and Time

- Time current time
- Date current date

Licence

- Licence type licence key type
- **Remaining hours** remaining hours of a time-limited licence, Unlimited for an unlimited licence
- Status Limited / Unlimited / Expired

Licence key types:

- **APP** allows third party applications to be loaded, this licence is active once the device is purchased.
- LAUNCHER allows 2N[®] IndoorTouch launcher to be switched to Android launcher
- HTTP API provides 2N[®] IndoorTouch control via API
- MEET allows 2N IndoorTouch launcher to be switched to the 2N[®] Meeting Room application.

A Caution

• The original licence key will be overwritten by the new one! Be sure to use a valid licence key obtained from your supplier!

Warning

The APP licence unlocks the option to install user applications from a microSD card (SDHC) in 2N[®] Indoor Touch 2.0 of up to 16 GB. If, however, any user applications are installed, 2N TELEKOMUNIKACE a.s. does not guarantee a proper function and stability of such user applications and/or a correct function of the applications pre-installed in 2N[®] Indoor Touch 2.0. Should troubles occur, remove the user applications or reset the device factory values to get rid of the user applications and settings.

5.3 Device

This subsection describes how to configure the $\mathbf{2N}^{\$}$ Indoor Touch launcher via the web interface.

Contents:

- 5.3.1 Network
- 5.3.2 Home Screen
- 5.3.3 Local Settings
- 5.3.4 Display
- 5.3.5 Audio
- 5.3.6 System Administration

5.3.1 Network

The Network section describes how to configure the Ethernet adapter in **2N**[®] **IndoorTouch 2.0**:

- Use Ethernet enable the Ethernet connection
- Use DHCP Yes/No enable/disable obtaining settings from DHCP
- IP address current IP address
- IP mask IP mask address
- DNS IP DNS IP address
- IP gateway IP gateway IP address
- Change settings display the setting editing window

ADD NETWORK

- Use Wi-Fi enable/disable the Wi-Fi connection. Ethernet and Wi-Fi can be used at the same time. If these two networks are used, select the network for the Internet connection. By turning off Wi-Fi you may execute a system logout. The device may no longer be available at the current address
- Available networks display the list of available Wi-Fi networks.
- Stored networks display the list of stored networks.

| Adva | nced network settings | | |
|------|---|---|--|
| 0 | Connection to two networks simultaneously | 3 | |
| 0 | Status: Enabled | | |
| Conn | ection type | | |

The option to get connected to two different network interfaces at the same time enables the product to be operated in two different network environments simultaneously. Thus, for example, you can communicate with the 2N intercoms in one network via Ethernet and control home automation in another network via Wi-Fi. Remember to define the network to be used for Internet connection if two networks are connected simultaneously.

- Connection to two networks simultaneously display the Ethernet + Wi-Fi connection state.
- **Connection type** display and edit the Internet connecting network.

A Caution

 Where two networks are used simultaneously (Ethernet + Wi-Fi), packets are not routed from one network to another. It is because 2N[®] Indoor Touch 2.0 is just a client and not a network element in either network.

5.3.2 Home Screen

The Home Screen tab helps you set positions for applications and their icons and includes the list of all available applications in the system.

| | (L) Time | | کُنْ _{Weather} | |
|------------------------|----------------|-------------|----------------------------|---|
| Správce souborů | O Prohlížeč | A Interkomy | Galerie | ۲ |
| Display weather widget | | | | |

- **Display weather widget** display the current weather information.
- **Default layout** reset the default application icon layout on the home screen.

| Application | | | |
|------------------------|--------------|-------------------|---------------------|
| USED APPLICATIONS MORE | APPLICATIONS | | |
| Application 🔨 | Name | Installation date | Version |
| 2ND IP Mobile | Intercoma | 11.07.2018 | 4.43(414) |
| File Manager | File Manager | 12.07.2018 | 2.1.2 (212) |
| Galerie | Gallery | 12/07/2018 | 1.1.40030 (40030) |
| Prohlížeč | Browser | 12.07.2018 | 4.4.2-20180712 (15) |

Application

- Used applications display the list of used applications on the home screen.
- More applications display the list of all applications available in the device.

Click a position to display a position setting window:

| Add application t | to position 5 | × |

| A Caution | | |
| (i) | curity reasons, it is impossible to remove the setting and in icons from the Home Screen. All you can do is create their duplic positions and then remove the icons from their original positions. | ates on |

5.3.3 Local Settings

The tab helps you change the language, time zone and weather settings.

| Basic settings | | |
|--|----------------------------------|------|
| Device name * 2N Indsor Touch 2.0 | | SAVE |
| Language Deutsch (Deutschland) | | |
| Date and time | Weather | |
| Time zone GMT+01:00 Madrid (Europe/Madrid) - | Leoston Prague,CZ | SAVE |
| NTP server scolintplorg | Update Units 1 hour - Metric | |
| Use time from LAN Currently displayed date and time 02.11.21.11-45.com | Source Data by OpenWeatherMap | |
| Use 24-hour format | | |

- Basic settings
 - **Device name** user device ID. Shown in 2N[®] Network Scanner and 2N[®] IP Eye in the lists of LAN devices visible to other 2N devices.
 - Language change the language for most of the applications (Gallery, etc.). English is used by default.
- Date and time select the date, time and time zone.
 - **Time zone** select the time zone. GMT + 00:00 is used by default.
 - Use time from LAN use network time or set time manually.
 - Currently displayed date and time date and time currently displayed on the home screen.
 - Date display format select the date display format.
 - Use 24-hour format select either 12-hour or 24-hour format.
- Weather change the weather settings.
 - Location location for the weather forecast. Keep the OpenWeatherMap.org format.
 - Save save the set location.
 - **Update** set the weather data refreshment rate: 1 hour or 2 hours.
 - Units temperature units: Metric (°C) or Imperial (°F).
- **Source** open the data source: OpenWeatherMap.org.

5.3.4 Display

The Display tab helps you change the display turn-off and brightness as well as LED notifications.

| Display | | |
|-------------------------------------|---|-------|
| Switch off display in 30 minutes | | ÷ |
| Brightness | • | 100 % |
| Notification LED | | |
| Blue LED at display off | | |

- **Display** display settings
 - Switch off display in turn off the display in 1 to 30 minutes
 - Brightness set the display brightness: 10–100 %
- Notification LED set the LED notifications
 - Blue LED at display off when the display turns off, the blue LED goes on. This setting helps you identify whether your display or the device is off.

5.3.5 Audio

This tab helps you set the volume of ringing, notifications, applications and others.

- **Application volume** set the music, video, game and audio volumes: 0–100 %.
- **Notification volume** set the ringing and notification volumes: 0–100 %.
- Alarm volume set the alarm clock volume: 0–100 %.

5.3.6 System Administration

The System Administration tab helps you upgrade firmware, back up/upload configuration and change the password.

| System administration | | | |
|---|-----------------------------------|--------------------------------|---|
| Enable service mode | | | |
| System administration Enable service mod | e – enable access to the o | device for servicing purposes. | |
| G RESTART DEVICE | C FACTORY RESET | FIRMWARE UPGRADE | |

| Factory reset – confirm ar | nd perform the factory re | set. | × |
| Factory reset – confirm ar Firmware upgrade – uplo | nd perform the factory re | set. | × |
| Factory reset – confirm ar Firmware upgrade – uplo Device FW upgrade | nd perform the factory re | set. | × |

CANCEL UPGRADE

- **Select file Select** select the .img firmware file.
- FW status display the firmware upload status.
- **Current version** display the current firmware version.

Configuration

- **Download Configuration** download the current configuration into a PC.
- **Upload Configuration** upload configuration from a PC file to the device. Click to display a window to select whether the whole configuration is to be uploaded or the part containing IP addresses should be omitted.

| Password | | | |
|---------------------|------------------------|------------------|--|
| Use separate web ac | cess password | | |
| WEB ACCESS PASSWORD | ADMINISTRATOR PASSWORD | SETTING PASSWORD | |

Password

- Use separate web access password set a separate access password for the device web interface.
- Web Access Password set a web interface access password. Make sure that it contains eight characters at least including one capital letter, one small letter and one digit.
- Administrator Password set an administrator setting access password.
- Setting Password set a device setting access password.

Screen security

Screen security

• Screen lock – display the current screen security details. Activate the function on the device display only.

| Logs | | | | |

| Current status | ERROR | | | |
| Buffer size | 20480 kB | | | |
| Buffer usage | 0 kB | | | |
| C RESET | ▶ START | DOWNLOAD | | |

Network trace

If **2N**[®] **Indoor Touch 2.0** communicates with a 2N IP intercom or a third-party device, the network trace can be a very useful diagnostic and troubleshooting tool should the communication fail.

🕑 Tip

 Refer to the FAQ section for how to download the network trace and logs from 2N[®] Indoor Touch 2.0.

5.4 Application

This subsection describes how to change the **2N**[®] **IP Mobile** configuration via a web interface. Contents:

- 5.4.1 Intercoms
- 5.4.2 Settings

5.4.1 Intercoms

The Intercoms tab helps you display the devices added to **2N[®] IP Mobile** and new LANs and SIP Proxy devices.

sets the device ID to be displayed in the LAN device list in all the 2N devices in one and the same LAN. You can direct a call to this device by setting the user phone number as device:device_ID in these devices.

- **Restart** restart the **2N**[®] **IP Mobile** application.
- The pencil icon helps you edit the device ID.

| Device ID setting | × |
|--|------------|
| Device ID* 2NIndoorTouch-5221010046 | |
| Set the device ID to be displayed in the LAN device list in all the 2N devices this device by setting the user phone number as device:device_ID in these c | |
| | CANCEL USE |
| 00 | |
| Recorder | |

| Recorder settings | | × |

| DFF | | |
| Ringing timeout before activation | | |
| 10 seconds | | * |
| Recorder announcement | | |
| Default notification | | * |
| | | |
| | CANCEL | USE |

Recorder Settings

- **ON/OFF** enable/disable the recorder function.
- **Ringing timeout before activation** set the recorder activation timeout: 10 to 30 seconds.
- **Recorder announcement** select the recorder announcement. Cannot be set via the web.

| Input and output settings | | × |
|--|--------|-----|
| Doorbell ringtone Flutey Phone | | |
| Ignore DND setting for inputs | | |
| OFF OFF | | |
| Ignore DND setting for outputs | | |
| OFF OFF | | |
| Application reacts to the following inputs | | |
| Input 1 | | |
| Input 2 | | |
| The application uses the following outputs | | |
| Output 1 | | |
| Incoming call notification Activation option at incoming call Select input | | |
| | | |
| Output 2 | | |
| | CANCEL | USE |

Input and output settings

- **Doorbell ringtone** choose the default user doorbell ringtone. The tone length is set to 10 s at doorbell activation.
- **Ignore DND setting for inputs** allow this parameter to ignore the DND mode at input activation.
- **Ignore DND setting for outputs** allow this parameter to ignore the DND mode at output activation.
- **Application reacts to the following inputs** select the input to be used, both the inputs can be used simultaneously.
- **Input 1, 2** activate the doorbell button input.
- **The application uses the following outputs** select the output to be used, both the outputs can be used simultaneously.
 - **Output 1, 2** activate the relay output. One output can be connected to 1 input or 2 inputs at the same time.

- **Incoming call notification** when the doorbell button is pressed, a notification is displayed on the device and acoustic signaling is activated.
- Activation option at incoming call when the doorbell button is pressed, a notification is displayed on the device, acoustic signaling is activated and the remote control option becomes available for input 1 / 2 lock activation as set for the user.
 - **Input 1, 2** connect the input to the given output.

Tip Make sure that the wiring diagram shown on the device motherboard is kept to make the system work properly. Refer to Subs. 2.1 Before You Start for motherboard details.

| External ringing | | |
|---|--------|-----|
| External ringing setting | | × |
| OFF | | |
| Invert relay output | | |
| Ignore DND setting | | |

| O Relay 2 | | |
| Minimum relay activation time (seconds) * | | |
| Maximum relay activation time (seconds) * 30 | | |
| | CANCEL | USE |
| External ringing settings | | |

• **ON/OFF** – enable/disable the external ringing function.

- **Invert relay output** set the input response to the pulse rise/fall time.
- **Ignore DND setting** indicate an incoming call by an output in the DND mode.
- **Used output** select the hardware output.
- **Minimum relay activation time (seconds)** set the minimum relay activation time in which the external ringing is automatically terminated.
- Maximum relay activation time (seconds) set the maximum relay activation time in which the external ringing is automatically terminated.

| Do Not Disturb mode | | |

Do Not Disturb mode setting

• **Do Not Disturb mode** – activate the one-time DND mode.

- **Do Not Disturb activation time** set a time interval in which the DND mode is active: from 15 minutes to 24 hours or permanently.
- **Reject Calls in DND Mode** enable automatic call rejection while the Do Not Disturb mode is on.
- **Night Do Not Disturb mode** activate the night DND mode.
- Activation time set the exact night DND activation time.
- **Deactivation time** set the exact night DND deactivation time.
- **Days** select the weekdays on which the night DND mode is to be active.

| | | CANCEL | USE |

SIP Proxy settings – set the data necessary for the SIP Proxy server connection.

- **ON/OFF** enable/disable the SIP Proxy connection and set the details.
- **Displayed name** set the device/ **2N**[®] **IP Mobile** name to be displayed for the SIP Proxy purposes.
 - **Username** user name/number as registered with the SIP Proxy server.
 - **Password** password of the user registered with the SIP Proxy server.
 - SIP Proxy address SIP Proxy server IP address

- **Port** select the port for the SIP Proxy server to listen on. Default value: port 5060. Range: 1–65535.
- **SIP port randomization** set the SIP port randomization.
- **Transport protocol** select the transport protocol.
 - **SIP Registrar** enable device registration with the set SIP Registrar.
 - Address set the SIP Registrar IP address or domain name.
 - **Port** set the SIP Registrar port (typically 5060).
- **Registration Expiry** set the registration expiry, which affects the network and SIP Registrar load by periodically sent registration requests. The SIP Registrar can alter the value without letting you know.

| Call Settings | | |

Edit device

- **Device name** device name with the editing option.
- Unlock button 1–4 define the button(s) to be displayed.
 - Lift select this option to display the selected button only during the call as a lift icon.

🕑 Tip

• Refer to here for the intercom settings to ensure the proper functionality.

5.4.2 Settings

This tab helps you set other functions related to applications.

| Settings | |
|--------------------------------------|-----|
| Enable application installation | |
| Return to application after call end | |
| Logging | |
| Allow notifications | |
| Launch application on startup | |
| None | |
| Open URL on startup | USE |

- **Enable application installation** enable installation of third party applications.
- Return to application after call end set this option to move 2N[®] IP Mobile to the background again after an incoming call is ended.
- Logging enable/disable application logging to the system log.
- Allow notifications allow applications to control notifications.
- **Launch application on startup** enter an application name (*com.android.browser, e.g.*) to launch this application upon startup.
- **Open URL on startup** enter the URL address to launch a web browser and move to the set address upon startup.

A Caution

• The application and URL are mutually exclusive upon startup.

5.5 Limitations

The web interface is always available to 1 user at a time. This applies to more tabs on 1 PC too. Therefore, remember to log in to each tab every time.

A Caution

• Once a new user logs in to the web interface, the previous user will be logged out automatically.

7. Technical Parameters

Power Supply

• **Type:** external power adapter part no. 91378381E, 91378381GB, 91378381US (SELV type with LPS) 90–230 V, 50–60 Hz to 12 V DC 2 A or Power over Ethernet (PoE 802.3af)

Power Consumption

- In idle:
 - **12 V:** 2,64 W 0.22 A
 - **PoE:** 3,6 W
- Max. in active state: 12 W / 1 A

User Interface

- Control: capacitive touch panel
- Display size: 7"
- **Resolution:** 1024 x 600 px
- Backlight: LED
- Status indicator: 1 RGB LED

Audio

- Microphone: integrated
- Loudspeaker: 2 W integrated

OS

Android 6.0.1

Interface

- LAN: 10/100BaseT, RJ-45; Cat5e or higher (recommended)
- Memory card: microSD card (SDHC) up to 16GB
- WiFi: 802.11b/g/n, integrated antenna (not available in Korea, Japan and Malaysia)

Wi-Fi Module

- Supported authentication methods:
 - WEP, WPA/WPA2 PSK and 802.1x EAP

Mechanical Parameters

- Dimensions (w x h x d): 235 x 165 x 40 mm
- Weight: 850 g
- **Operating temperature:** 0°C 60°C
- Relative humidity: 10% 90% (non-condensing)
- Storing temperature: -20 °C 70 °C
- Recommended altitude: 0-2000 m

I/O Description

• HW v4

| Signification | Name | Restriction |

Surface mounting

8. Supplementary Information

This section provides supplementary information on the **2N[®] Indoor Touch 2.0** product.

Here is what you can find in this section:

- 8.1 Troubleshooting
- 8.2 Directives, Laws and Regulations General Instructions and Cautions
- 8.3 Other Countries' Legislation

8.1 Troubleshooting

Trouble: The device always switches off the display before timeout.

Advice: Check the device temperature. If improperly installed, 2N[®] Indoor Touch
 2.0 automatically turns into the stand-by mode to reduce the device temperature if critical to avoid forced turn-off / reset in extreme cases. The user is notified of this problem by a short display of the notification window. Display the current device temperature in the Setting section.

Trouble: The device does not start and remains in one of the LED states or gets restarted round and round.

• **Advice:** Press and hold the Reset button on the device backside during the startup to restore the factory values automatically. If the trouble persists, upgrade the system via an SD card. If the trouble still persists, contact the Servicing centre.

Trouble: The device fails to emit sounds, even the incoming call ringing.

• **Advice:** Check the volume setting and adjust the loudspeaker volume level if necessary with the Volume up/down buttons on the lower status bar.

For the most frequently asked questions refer to faq.2n.cz.

8.2 Directives, Laws and Regulations - General Instructions and Cautions

2N[®] Indoor Touch 2.0 conforms to the following directives and regulations:

- 2014/53/EU for radio equipment
- 2011/65/EU on the restriction of the use of certain hazardous substances in electrical and electronic equipment
- 2012/19/EU on waste electrical and electronic equipment

Industry Canada

This Class B digital apparatus complies with Canadian ICES-003/NMB-003.

FCC

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules.

NOTE: These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna
- Increase the separation between the equipment and receiver
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected
- Consult the dealer or an experienced radio/TV technician for help

Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

Please read this User Manual carefully before using the product. Follow all instructions and recommendations included herein.

Any use of the product that is in contradiction with the instructions provided herein may result in malfunction, damage or destruction of the product.

The manufacturer shall not be liable and responsible for any damage incurred as a result of a use of the product other than that included herein, namely undue application and disobedience of the recommendations and warnings in contradiction herewith.

Any use or connection of the product other than those included herein shall be considered undue and the manufacturer shall not be liable for any consequences arisen as a result of such misconduct.

Moreover, the manufacturer shall not be liable for any damage or destruction of the product incurred as a result of misplacement, incompetent installation and/or undue operation and use of the product in contradiction herewith.

The manufacturer assumes no responsibility for any malfunction, damage or destruction of the product caused by incompetent replacement of parts or due to the use of reproduction parts or components.

The manufacturer shall not be liable and responsible for any loss or damage incurred as a result of a natural disaster or any other unfavourable natural condition.

The manufacturer shall not be held liable for any damage of the product arising during the shipping thereof.

The manufacturer shall not make any warrant with regard to data loss or damage.

The manufacturer shall not be liable and responsible for any direct or indirect damage incurred as a result of a use of the product in contradiction herewith or a failure of the product due to a use in contradiction herewith.

All applicable legal regulations concerning the product installation and use as well as provisions of technical standards on electric installations have to be obeyed. The manufacturer shall not be liable and responsible for damage or destruction of the product or damage incurred by the consumer in case the product is used and handled contrary to the said regulations and provisions.

The consumer shall, at its own expense, obtain software protection of the product. The manufacturer shall not be held liable and responsible for any damage incurred as a result of the use of deficient or substandard security software.

The consumer shall, without delay, change the access password for the product after installation. The manufacturer shall not be held liable or responsible for any damage incurred by the consumer in connection with the use of the original password.

The manufacturer also assumes no responsibility for additional costs incurred by the consumer as a result of making calls using a line with an increased tariff.

Electric Waste and Used Battery Pack Handling

Do not place used electric devices and battery packs into municipal waste containers. An undue disposal thereof might impair the environment!

Deliver your expired electric appliances and battery packs removed from them to dedicated dumpsites or containers or give them back to the dealer or manufacturer for environmental-friendly disposal. The dealer or manufacturer shall take the product back free of charge and without requiring another purchase. Make sure that the devices to be disposed of are complete.

Do not throw battery packs into fire. Battery packs may not be taken into parts or short-circuited either.

8.3 Other Countries' Legislation

6. Maintenance - Cleaning

If used frequently, the device surface gets dirty. Use a piece of soft cloth moistened with clean water to clean the device.

You are recommended to follow the principles below while cleaning:

Do not use aggressive detergents (such as abrasives or strong disinfectants). Use appropriate cleaning agents suitable for glasses, optical devices, screens, etc. Alcohol-based cleaners may not be applied. We recommend you to use IT cleaning wipes.
