

BT Smart Audio Baby Monitor User Guide

We recommend set-up close to your router to ensure a good signal.

1
Plug in the BT Smart Audio Baby Monitor.

2
Go to the App Store and download the **BT BabyAudio** app. If using an iPad you'll need to select the 'iPhone apps' tab in the search results.

3
In Settings, select Wi-Fi, make sure this is switched to on and then connect to the monitor. The network name will start with 'BT-Baby...'.
BT-Baby...

4
Launch the BT BabyAudio app and follow the on screen instructions.

5
The app will pair with the baby unit (this may take several minutes).

6
Select your usual Wi-Fi network from the list. You may need to enter your Wi-Fi password.

7
You may be prompted to upgrade firmware. If you are, click 'yes' (this may take several minutes).

8
The app is now ready to use to listen to your baby.

To register additional iOS devices, download and launch the app and follow the on screen instructions.

Please note – when setting up, the additional devices need to be on the same home wireless network as the baby unit.

Help Centre

There is a help centre with FAQs in the app (please see the 'more' tab where you will find Help Centre). The same FAQs can be accessed via the following link: bt.com/smartaudiohelp
