ASCOM 9d24 MESSENGER COMBINES ADVANCED MESSAGING AND HIGHLY VERSATILE TELEPHONY

The Ascom 9d24 Messenger provides all the functions you need in a wireless phone. A high-tech communication tool in a slim yet robust package, the 9d24 Messenger is perfect for just about any workplace. Featuring a scratch-proof keypad, Messenger is also made to withstand dirt, water and crash landings on the floor – though you won't have to worry too much about the latter thanks to a secure clip function.

Always online

The 9d24 Messenger combines advanced messaging and highly versatile telephony – ensuring easy and reliable access to vital information from, for example, building automation systems, production lines, Internet and intranet, as well as communication with other users. It keeps you online and on call at all times.

The 9d24 Messenger is part of the Ascom 9d System, which integrates personal security, voice communication and messaging. It's also easily adaptable to existing Ascom systems.

A multi-purpose handset

The Messenger is designed to organise and simplify your working day. It's also extremely durable, water-resistant, easy to handle, while also featuring a big, bright backlit display for excellent readability. What's more, the Messenger offers loudspeaker for hands-free operation and a vibrator for silent calls.

Always in touch

The 9d24 Messenger is the ideal choice for workplaces where personnel are constantly on the move and need to get in touch with just the touch of a button: factories, hotels and hospitals, for example.

PRODUCT SHEET: ASCOM 9d24 MESSENGER

Features	
Access to central directory	Direct access to the company phonebook is available separately.
Call list/local phonebook	Convenient access to the 20 latest calls and sufficient memory for 100 entries in the local phonebook.
Dust, moisture and shock proof	The handset is both dust and water-resistant in accordance with IP64 and designed to withstand shock in accordance with IEC 68-2-32 (it was dropped twelve times from 1 meter onto solid concrete).
Hands-free operation	A separate loudspeaker together with signal processing allows hands-free operation and use of the handset for conference calls. When placed in the charger, the handset functions perfectly as a normal desktop phone.
Illuminated keys	The alphanumeric keypad is backlit to facilitate use of the handset in bad light conditions. What's more, bright backlighting of display and keypad ensures readability.
Keys for intuitive operation	A central navigation key allows convenient orientation of the menus. Personalised soft keys and hot keys give easy access to the most commonly used functions.
Large graphic display	Up to six lines of text, with 20 characters each, can be shown at once on the illuminated display.
Message list	Memory (FIFO) for 20 messages with a total of 20 000 characters.
SIM card identification	Each user has a SIM-card, storing the handset ID and all personal settings, including profiles and soft key functions. It's easily transferred from one handset to another when the time comes.
Simultaneous message and voice function	Always online for high priority messages since the voice and message functions work independently of each other.
Theft protection	It is possible to pre-set the phone to work in a specified system – and nowhere else.
Vibrator for silent calls	A built-in vibrator makes silent calls "heard".
All messaging features are system dependent and require additional equipment.	

Accessories

- Medic version
- Headsets with microphone
on cable or boom
- Headset with hearing protection
- Security string
- Clips
- Desktop charger
- Charging rack
- Leather case

A superior package

Complemented by a battery pack adapter, the Messenger's Lithium Ion battery is longer lasting than ever before. In fact, battery charging continues even during a call once the handset has been placed in a charger.

Furthermore, thanks to a generous number of volume steps, you'll easily find just the right level.

Messenger is also upgradeable with licence to 9d24 MkII Protector.
